Thoughts

thoughts

Rapid prototyping = good

otherwise quite a time
commitment a potential light-
weight alternative to rails or pear
framework, low maintenance

active client relationships

although there is a public
forum and community

OpenCart is a little overloaded
with template references
would like to see it more
module - like

Goal to see Mac development.

No sign of any gui or admin
interface for module config or
management

other thoughts

location tracking on project or

large stage show visuals
projection / light / interaction
